

Installation manual  
Panel

## Position plate

Determine the position of the sheet material and attach it using one of the two methods we explain later in this assembly guide.

1. Fastening with mounting kit
2. Fastening with screws

## 1. Fastening with mounting kit

If you choose to attach with mounting sealant make sure the sealant is well distributed over the panel for best adhesion.

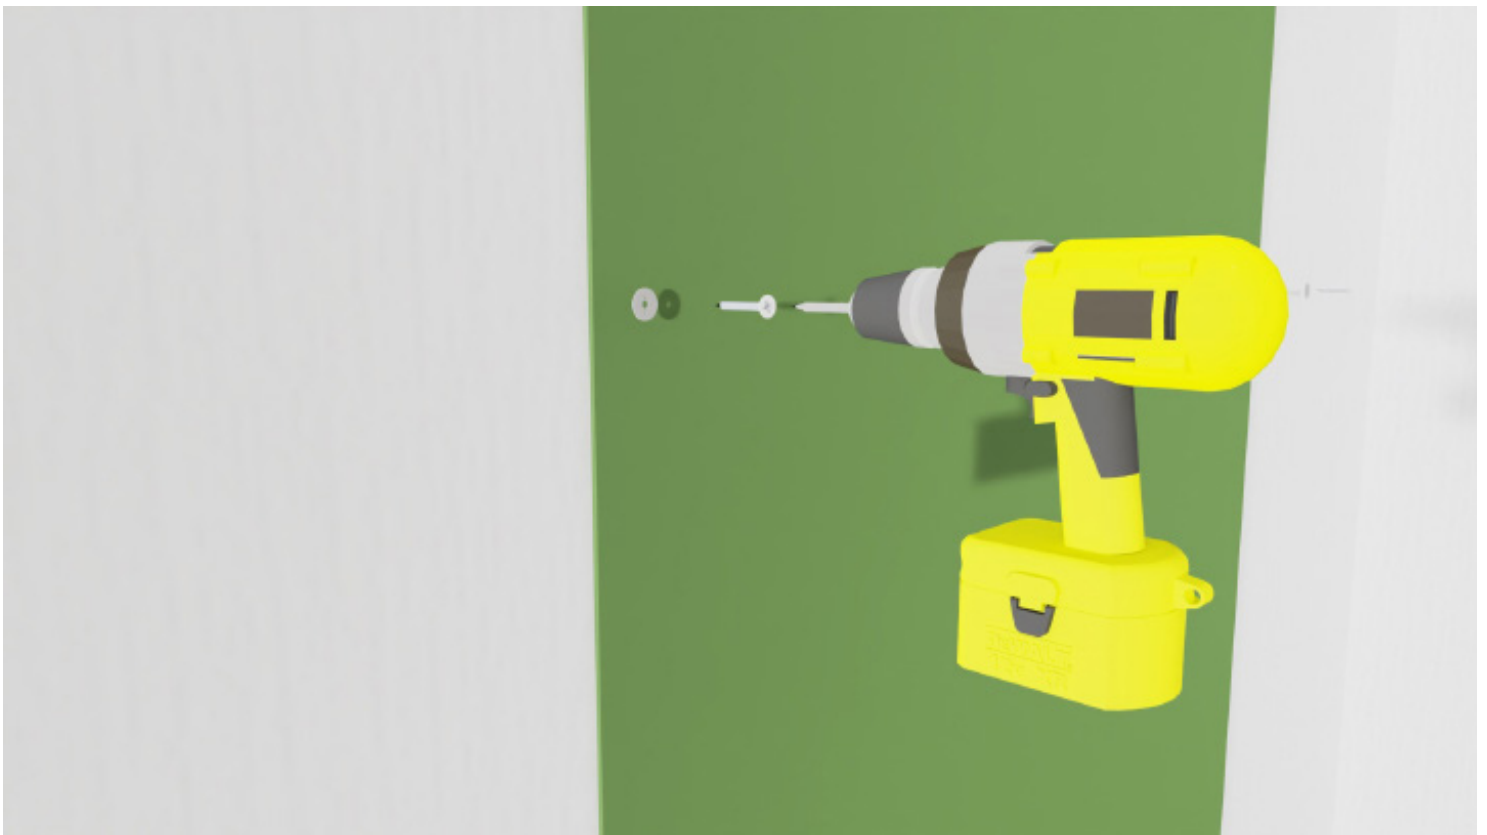

*CAUTION: Use too much sealant rather than too little!*

## 2. Fastening with screws

If you choose to attach with screws, choose the right screw (and plug if necessary). Use a body washer for better pressure distribution on the sheet metal.

## 2. Fastening with screws

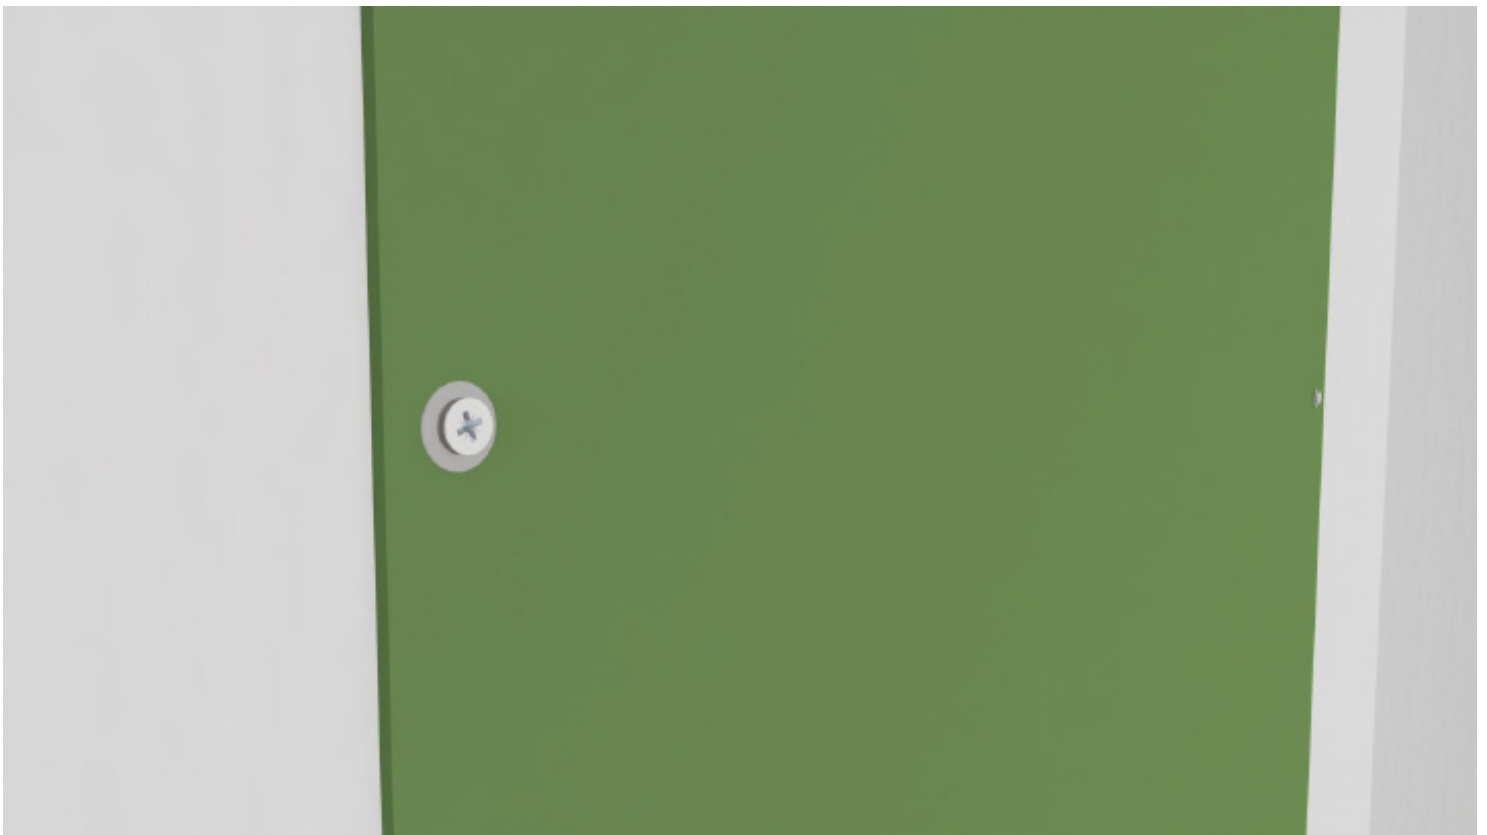

Apply at least 6 screws to a 240 × 120 cm panel.

## 2. Fastening with screws

The picture below shows how it looks when you have attached the screw.

## Acoustic PET felt solutions for all purposes!

Our products are made from recycled PET, minimal colour differences may occur per production batch. No rights can be derived from this.

When the surface of the PET felt product is larger than 1m<sup>2</sup>, the adhesive backing is a supporting factor. We recommend additional gluing of the product with the better mounting kit for placement on the wall or ceiling.

**CAUTION:** the felt should not be exposed directly to sunlight, this may cause discolouration!
